                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Kim J.L., Morgenstern K.A., Griffith J.P., Dwyer M.D., Thomson J.A., Murcko M.A., Lin C., Caron P.R.; "Hepatitis C virus NS3 RNA helicase domain with a bound oligonuclectide: the crystal structure provides insights into the mode
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in P1 and Ser or Ala in P1.

CATALYTIC ACTIVITY: N nucleoside triphosphate - N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ACTIVATION OF NS3.
-I- FUNCTION: NS5A SEEMS TO HAVE A TRANSCRIPTIONAL ACTIVATORY ROLE.
-I- FUNCTION: NS5B IS A RNA-DEPENDENT RNA POLYMERASE THAT PLAYS AN ESSENTIAL ROLE IN THE VIRUS REPLICATION.

MACHODA A., Miyakawa Y., Mayumi M.;

Mucleotide sequence of the genomic RNA of hepatitis C virus isolated from a human carrier: comparison with reported isolates for conserved and divergent regions ";

J. Gen. Virol. 72:2697-2704(1991).

J. Gen. Virol. 72:2697-2704(1991).

HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

C. TATALITIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in pl and Ser or Ala in pl'.

C. CATALITIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                               1-2000.7

Genome polyprotein (Contains: Capsid protein (P22);
Envelope glycoprotein El (GP32) (GP35); Envelope glycoprotein El (GP31); Protein P7; Nonstructural protein NS2 (P20) (Hepacivirin) (EC 3.4.22.-); Protease/helicase NS3 (P70) (Hepacivirin) (EC 3.4.21.98); Nonstructural protein NS48 (P27); Nonstructural protein NS58 (P56); Nonstructural protein NS58 (P66); P00) (RNA-directed RNA polymerase) (EC 2.7.7.48)]. Viruses; SSRNA positive-strand viruses, no DNA stage; Flaviviridae; Hepacivirus.
                                                                                                                                                                                                                                                       MEDLINE-92230232; PubMed-1314459;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (RNA)(N).
SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A SUBUNIT: THE UNITION OF THIS VIRUS IS A NUCLEOCAPSID IS A COMPLEX OF PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                            VICOLOGY 188:331-341(1992).

-1- FUNCTION: THE SWALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDODHOBIC. SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

-1- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viprecursor polyprotein. commonly with Asp or Glu in the P6 position, Cys or Thi in Pl and Ser or Ala in Pl'.

-1- CATALYTIC ACTIVITY: N nucleoside triphosphate - N diphosphate
                                                                                                                                                                                                                                                                                                         *Full-length sequence of a hepatitis C virus genome having poor homology to reported isolates: comparative study of four distinct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -1 - SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY S29.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    InterPro; IPR002166; HCV_RGRP.

SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Polyprotein; Glycoprotein; Transferase; RNA-directed RNA polymerase;
Core protein; Coat protein; Envelope protein; Helicase; ATP-binding;

RA Chen P.J., Lin M.H., Tai K.F., Lin P.C., Lin C.J., Chen D.S.;
RY The Taiwanese hepatitis C virus genome: sequence determination and mapping the 5' termini of viral genomic and antigenomic RNA.";
R. Virology 188:102-113(1992).
C -1- CHOOTON: THE SMALL PROFIENS NSZB, NSZB, NSZB, AND NSZB ANE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
NSJ AND NSS MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.
C -1- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 postition, Cys or Thr in Pl and Ser or Ala in Pl'.
C -1- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate + (RNB)(N).
C -1- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCARSID OF SUBUNIS: PROTEIN E NUCLEOCARSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-APR-1993 (Rel. 25, Created)

"The nucleotide sequence of the core region of HCV in Pakistan and Bangladesh: The geographic characterization of HCV in South Asia.";
Submitted (MAR-1994) to the EMBL/GenBank/DDBJ databases.
-!- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MANA (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

"The nuclectide sequence of the core region of HCV in Pakistan and
Bangladesh: The geographic characterization of HCV in South Asia.";
Submitted (MAR.1994) to the EMBL/GenBank/DDBJ databases.
-!- SUBUNT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A
LIPOPMOTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GIXCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF
PROTEIN C AND MRNA (BY SIMILARITY).

"Genotype determination of hepatitis C virus from Northern India:
Identification of a new subtype.";
J. Med. Virol. 48:191-188(1996).
-1- SUBUNT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY
LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF
PROTEIN C AND MRNA (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 150;

Hepatitis C virus quasispecies in cancerous and non-cancerous hepatic
                                                                                                          Submitted (MAY-2001) to the EMBL/GenBank/DDBJ databases.
-!- SUBMITT: THE VIRION OF THIS VIRUS IS A NUCLECCARSID COVERED BY LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN M AND GIYCORROTEIN E. THE NUCLECCARSID IS A COMPLEX OF PROTEIN C AND MRNA (BY SIMILARITY).

Patent No. 6180768
GENERAL INFORMATION:
APPLICANT: MARRIENS, GERFT
APPLICANT: STUYVER, LIEVEN
TITLE OF INVENTION: NEW SEQUENCES OF HEPATITIS C VIRUS GENOTYPES
TITLE OF INVENTION: ADD THEIR USE AS PROPHYLACTIC, THERAPEUTIC AND DIAGNOSTIC;
TITLE OF INVENTION: AGENTS
NUMBER OF SEQUENCES: 207
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match 89.1%; Score 139; DB 3; Length 28; Best Local Similarity 92.9%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 23, Application US/08083947
Patent No. 5639594
GENERAL INFORMATION:
APPLICANT: Wang, Chang Yi
APPLICANT: Hosein, Barbara
TITLE OF INVENTION: No. 5639594el Linear and Branched Peptides Effective
TITLE OF INVENTION: in Diagnosing and Detecting No. 5639594-B Hepat
NUMBER OF SEQUENCES: 23
CORRESPONDENCE ADDRESS:
ADDRESSEE: M. Lisa Wilson
                                                                                                                                                                                                                                                                             GENERAL INFORMATION:

APPLICANT: Wang, Chang Yi

TILLE OF INVENTION: No. 5582968-1 Branched Hybrid and Cluster

TITLE OF INVENTION: No. 5582968-B Hepatitis

NUMBER OF SEQUENCES: 12

Mosaic protein; antigenic peptide; nucleocapsid; NC; hepatitis; REAL; restriction endonuclease assisted ligation; vaccination. New mosaic protein, comprising a plurality of homologous antigenic peptides from different genotypes of a species - useful for detecting hepatitis infection in an individual NC mosaic protein amino acid fragment C. (USSH ) US DEPT HEALTH & HUMAN SERVICES. 98WO-US17385 97US-0921887 17-JUN-1999 (first entry) Khudyakov YE; WPI; 1999-204671/17. Hepatitis C virus 25-AUG-1997; 21-AUG-1998; WO9910506-A1 04-MAR-1999. ó
                                         homologous antigenic peptides from different genotypes of a species. The antigenic peptides are from nucleocapsid (NC) proteins. A method for synthesising an artificial gene that encodes the mosatic protein is also provided. The method is designated restriction endonuclease assisted ligation (REAL). The mosaic protein and the artificial mosaic protein are useful for detecting a hepatitis infection in an individual. The mosaic gene and protein is also useful for deceting a hepatitis infection and institution against infection, especially hepatitis C. The method of synthesizing the artificial gene and the resulting mosaic protein improve the sensitivity, spectrum of immunoassays. This provides improved detection of hepatitis C virus. Sequences ANYOGGS-633 represent amino acid sequence of each monomer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Polymerase chain reaction; PCR; amplify; primer; non-A, non-B hepatitis; NANBH; virus; blood transmissible; detection; hepatitis virus; RT-PCR;

This sequence is encoded by the genome of a blood transmissible non-A, non-B hepatitis (NANBH) virus. The CDNA sequence was isolated using the primers given in AAQG3500-35. The amplified fragments are used in the detection of hepatitis virus. The target DNA was isolated from serum of chronically infected NANBH patients who were C100 antibody-positive and HCV RNA (NS5 region) positive. Reverse transcription-PCR and PCR were performed on CDNA and the total human NANBH DNA was constructed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    for

The invention relates to a mosaic protein, comprising a plurality of homologous antigenic peptides from different genotypes of a species. The antigenic peptides are from nucleocapsid (NC) proteins. A method for synthesising an artificial gene that encodes the mosaic protein is also provided. The method is designated restriction endonuclease assisted ligation (REAL). The mosaic protein and the artificial mosaic protein are useful for detecting a hepatitis infection in an individual. The mosaic gene and protein is also useful for vacchation against infection, especially hepatitis C. The method of synthesizing the artificial gene and the resulting mosaic protein improve the sensitivity, spectrum of immunoreactivity, and antigen specificity of enzyme immunoassays. This provides improved detection of hepatitis C virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mosaic protein; antigenic peptide; nucleocapsid; NC; hepatitis; REAL; restriction endonuclease assisted ligation; vaccination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 mosaic protein, comprising a plurality of homologous antigenic tides from different genotypes of a species - useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   expression cassette including a first polynucleotide region including a 5' non-coding region (NCR) sequence of an RNA virus and at least an N-terminal portion of a coding sequence of RNA virus, a second polynucleotide region including a 3' untranslated region (UTR) sequence of the RNA virus and at least a C-terminal portion of a coding sequence of the virus and at least a C-terminal portion of a coding sequence of the virus and at least a C-terminal portion of a coding sequence of the virus and at least a C-terminal portion of a coding sequence of the virus and at least a C-terminal portion of a coding sequence of the virus and a third polynucleotide regions; and a promoter sequence being operatively linked to expression cassette in a manner so as to enable a transcription of a minus strand RNA molecule from the expression cassette. Nucleic acid construct of the invention is useful for detecting the presence of an RNA virus in a cell. It is also useful for screening anti-viral drugs and determining drug in the construct of the invention and construct of the invention o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel nucleic acid construct useful for detecting the presence of RNA virus, comprises an expression cassette and a promoter operably linked to expression cassette for minus strand RNA transcription of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          an RNA virus. The present sequence is Hepatitis C virus HCV-S1 full-length polyprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          isolates. Isolated cDNA sequences are used for the prodn. of primers useful for detecting the presence of HCV in a sample, the primers are also useful for HCV genotyping. Proteins encoded by the cDNAs can be used in vaccines for immunising against HCV infection. The proteins may also be used to detect antibodies against HCV in serum, saliva, lymphocytes or other mononuclear cells. The antibodies may be used in the prevention of HCV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DNA and amino acid sequence of HCV envelope 1 and core proteins -used to determine HCV genotype and as vaccines against HCV infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAR92936-R92987 are HCV core proteins derived from 52 different HCV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Match 94.8%; Score 146; DB 17; Length 191; Local Similarity 96.4%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This interior describes a mover accounted that it is a conservity described and described that the consecutive amino acids from the capsid protein, provided that the consecutive amino acids from the capsid protein. The action of the invention has virucide, antidiammatory and hepatotropic activity. The attendated vaccine, and similar nucleic acid vaccines that encode the mutated capsid protein, are useful for protection against a choice for flavivitus diseases, e.g. yellow fever, Japanese and hepatitis, dengue, classical swine fever, bovine viral diarrhoea and hepatitis C. The specified deletion: (i) produces a reliably attendated contracted and does not revert to virusence; (ii) is exactly defined and does not effect immune responses to important proteins; and (iii) can not generate a non-natural virus by recombination. The mutant viruses eliminate the need to produced and the sexpense. The protective response to flavivirus lasts significantly longer than that to killed vaccines.

This sequence represents a fragment of the capsid protein from Hepatitis cribs (ivus) (ivus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Attenuated flavivirus live vaccine, useful for protection against e.g. yellow fever, comprises virus with attenuating deletion of amino acids from the capsid protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HCV; E1; envelope 1; core protein; HCV genotyping; antibody; vaccine;

Isolated cDNA sequences are used for the prodn. of primers useful for detecting the presence of HCV in a sample, the primers are also useful for HCV genotyping. Proteins encoded by the cDNAs can be used in vaccines for immunising against HCV infection. The proteins may also be used to detect antibodies against HCV in serum, sallva, lymphocytes or other mononuclear cells. The antibodies may be used in the prevention of HCV infection.
